The Challenge

Many organisations struggle to turn expertise into effective eLearning.

Common issues include:

- Generic off-the-shelf content that does not reflect your context
- Limited internal capacity to design learning material
- Content that does not work smoothly in your Learning Management System (LMS)
- Translation needs that slow down delivery
- Tools without guidance or support

92%

of the employees think that well-designed employee training programs have a positive effect on their level of engagement.

• **Axonify 2018**

Our Approach

We design and deliver high quality eLearning that fits your organisation.

Our services cover:

- Custom course design and development
- SCORM-compliant packages for your LMS
- On-demand and blended learning formats
- Support from concept through to upload and launch

Custom eLearning Design

We work with you to shape learning around your needs.

Accessible and plain language

We design with accessibility in mind, using clear layouts and straightforward language to reduce barriers to learning.

Tailored to your organisation

We tailor content to your risks, policies, and audience, making training relevant and easier to apply.

Structured, learner-centred design

We break content into clear modules that respect attention, reduce overload, and support retention.

Operationally grounded examples

We use real operational scenarios and examples, helping learners connect theory to day-to-day decisions.

Global Access

We design learning for international teams working across regions and time zones. On-demand content is available whenever learners need it, without relying on live delivery in a single time zone. Our work spans geographies, supported by associates around the world with expertise across industries, making education and training accessible to global teams.

Translation and Language Support

- We can provide AI-assisted translated versions of base content to support wider access.
- Suitable for early rollout, pilots, or internal use
- *Content is unverified and should be reviewed before formal or external release*

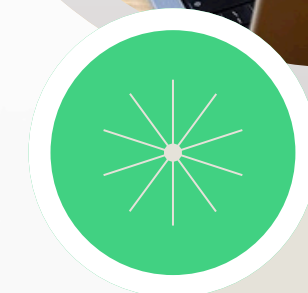

This option allows teams to move faster while planning future validation.

Why Work With Us

- We work closely with Critical Productions, giving us in-house video recording and editing capacity as part of our learning delivery.
- Experience designing learning for complex and regulated topics
- Proven delivery of custom LMS-ready content
- Ability to scale from single modules to full programmes
- Practical support to ensure success

If you are exploring custom eLearning, SCORM for your LMS, or tailored learning solutions for your team, we would be happy to discuss your needs.

Projects

International NGO, risk management capability building

We worked with an independent global development and humanitarian organisation that works in over 80 countries to advance children's rights and equality for girls. We designed and delivered a customised risk management programme included learning for both general staff and targeted modules for Risk Focal Points, supported by a structured library of fact sheets.

Content was delivered as SCORM and uploaded to the client's LMS. Modules combined captioned video clips, structured text, and supporting imagery, alongside downloadable resources and fact sheets designed for use beyond the course itself. Delivery was in English, with base content supported by AI-assisted translation into four additional languages to improve access across regions.

... may be an opportunity to them, but a threat to someone else. It may also be the **cause or the consequence** of someone else's risk. **Systems** can help to manage multiple risks.

Watch Prof. Sarah Gordon discuss why we should look at risks and opportunities from a systems perspective.

Why should we look at risks and opportunities as a system?

Projects

Major mining project, critical control awareness

For a large mining project we developed a customised SCORM module focused on Critical Control Specifications. The module was designed for internal delivery and uploaded directly to the client's LMS.

Content combined video and text to clearly explain critical control specifications and their application. A comprehensive review component was built into the module to confirm that learners could demonstrate understanding of key requirements, supporting assurance and consistency across the project.

Determine the key performance criteria and threshold for **Availability**

- 1 Minimum System Uptime: >95% uptime during operational hours.
- 2 MTBF (Mean Time Between Failures): ≥5000 operational hours for primary components such as fans, motors, and controllers.
- 3 Emergency Airflow Capacity: Must ensure at least 0.3 m³/s airflow per person in emergency situations for all occupied areas.
- 4 Airflow Velocity: Maintain airflow velocity as per statutory requirements (e.g., 0.5 m/s in working sections).

[Submit](#)

Scheduled Maintenance Adherence: Percentage of scheduled maintenance tasks completed on time ≥90% adherence. This Performance Specification is an example of:

...required performance
...maintenance ensures the reliability...

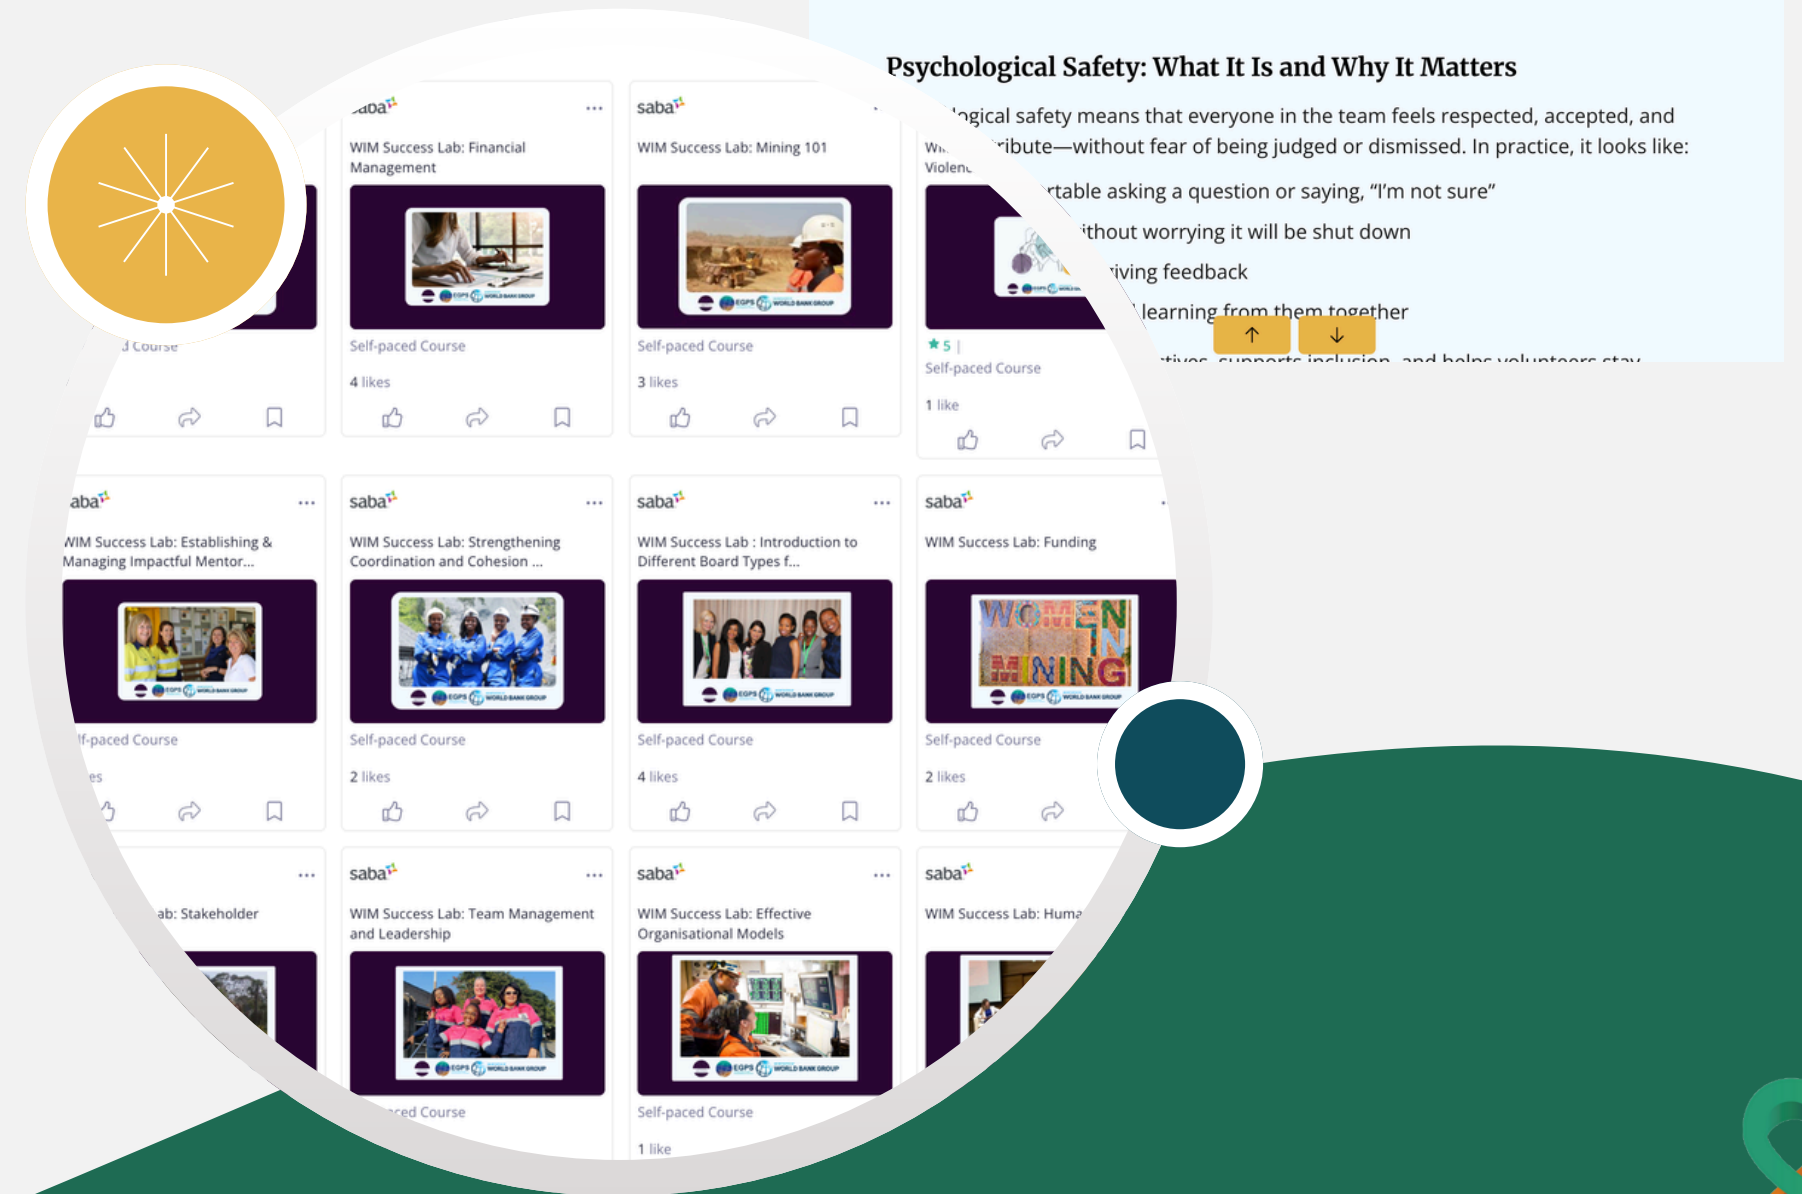

Projects

Global industry alliance, multi-module curriculum delivery

We acted as the content delivery partner for the International Alliance, supporting the development of a 15-module curriculum covering governance, leadership, technical, and professional topics. The programme is hosted on the World Bank Open Learning Campus and designed for a global audience.

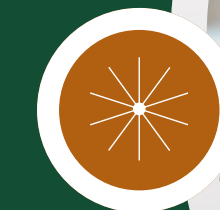

We worked with subject matter experts from across regions and industries and coordinated translation workflows to deliver content in English, French, and Spanish. This project demonstrates our ability to manage complex stakeholder inputs, deliver learning at scale, and meet the requirements of trusted international learning platforms.

Base Library

We have a strong library of base content across Risk Management, Sustainability and ESG, and mining. This content provides a proven starting point that can be customised to reflect your organisation, sector, risks, and internal policies.

We adapt structure, examples, language, and depth to suit your audience, then deliver it as LMS-ready SCORM or hosted learning. This approach reduces development time while ensuring training is relevant, practical, and aligned to how your organisation actually works.
